

# **Maryland Floodplain Mapping**

**DFIRM Fact Sheet**  
(Updated October 2017)

## **County Status in FEMA's DFIRM Mapping Process**

The Federal Emergency Management Agency (FEMA) is updating the Flood Insurance Rate Maps (FIRMs) for every county in the State of Maryland. During this update, FIRMs are transitioning from a paper product to a digital product that can be viewed in a variety of ways. The FEMA Map Service Center website, [www.msc.fema.gov](http://www.msc.fema.gov), will house all of the Digital FIRMs (DFIRMs).

The schedule on the second page of this fact sheet was developed by the Maryland Department of the Environment (MDE), in coordination with the FEMA Region III office. The status of each Maryland county is listed, and includes the scheduled release date of the preliminary DFIRM and target effective date. The time to progress from a preliminary DFIRM to an effective DFIRM is about 18 - 24 months, but could be shorter or longer depending on any issues that arise during the mapping process.

In addition to updated riverine flood studies being completed on a countywide basis, FEMA also completed a new coastal flood analysis of the Chesapeake Bay, its tidal tributaries, the Atlantic Coast and Coastal Bays. This will result in revised DFIRM panels being issued to some coastal counties that may be released on a separate schedule. Additional information pertaining to the coastal flood studies and mapping is available at the FEMA Region III outreach site [www.riskmap3.com](http://www.riskmap3.com).

To help citizens determine their flood risk, MDE created the DFIRM Outreach Program website. Please visit [www.mdfloodmaps.com](http://www.mdfloodmaps.com), and click on the Flood Risk Application icon on the right. The Flood Risk Application is an interactive web mapping tool designed to help the public understand their flood risk.

MDE is a Cooperating Technical Partner (CTP) with FEMA and developed an enhanced riverine (nontidal) mapping process in most of the State. These enhancements include updated riverine floodplain models in both detailed (Zone AE) and approximate study (Zone A) areas. Geographic Information System (GIS) data sets and digital topography were used to develop georeferenced HEC-RAS models for most of the riverine flood models derived after 2005. Data developed through the enhanced flood study analysis are available for download.

Once a DFIRM becomes effective, citizens may notice their flood risk has changed. A low-risk area may now be a high-risk area, or vice versa. Citizens may also find that flood insurance is now required for their property even though they never thought they lived in a flood prone area before. Don't wait for the new maps to become effective. Determine your flood risk now by reviewing the preliminary DFIRM for your respective county. If flood insurance is required for your location, buying it now could be advantageous. For more information about flood insurance, please contact your insurance agent, or visit [www.FloodSmart.gov](http://www.FloodSmart.gov).

Contact your local floodplain management office for information regarding mapping and regulations in your area.

<b>Montgomery County, MD</b>	N/A	N/A		
<b>Conocoheague-Opequon</b>	TBD	TBD	Watershed Basin Study	
<b>Gunpowder-Patapsco</b>	Target Summer 2018	TBD		
<b>Monocacy</b>	TBD	TBD		

\*Denotes MDE lead through mapping process

\*\* Denotes coastal study now set for release and includes community riverine study

SYNCHRONIZED – The counties where the FEMA studies for Riverine and Coastal DFIRM's were combined and released in one mapping product. These counties have one Preliminary DFIRM release and effective date.
